Chelyabinsk, Russian Federation, ul. Stalevarov, d. 49, kv. 221

Dear Miss Shmygleva,

we have reviewed your medical records and would like to invite you to participate in a clinical trial entitled "A PHASE I/II DOSE FINDING AND EFFICACY STUDY OF THE TUMOUR TARGETING HUMAN 131I-F16SIP MONOCLONAL ANTIBODY IN PATIENTS WITH CANCER".

Participation in this trial is free of charge.

All medical expenses regarding diagnostic procedure, treatment and possible acute side effects which may occur will be covered by the trial.

Please advise us when you will be available to travel so that we can make an appointment for your first hospital visit.

You will be here as an inpatient for 3-7 days on your first visit so that we can perform all preliminary imaging and blood tests. Within the next thirty days following your first visit we will determine whether you can receive the therapeutic dose and administer it again while you are here in the inpatient clinic (5-7 days). After treatment the observational period will be 8 weeks in which weekly visits will be necessary as an outpatient for blood work and imaging tests. We may allow you to have the blood work performed at home and sending us the results starting 4 weeks after treatment if we deem your clinical condition satisfactory. In this case we would have you back at 8 weeks following the treatment for followup imaging tests.

Please contact me at the numbers below or via e-mail with any queries.

Kind Regards

Dott. Luigi Aloj,
AF Medicina Nucleare
